

## Task 2

Go to <https://telesoftas.com/contacts/> and imagine that you have one hour to test this page. What actions would you take to test it? Please provide your plan.

First of all, I would classify all functions according to the how important each function is and set the priority for each.

Section	Function	Priority
Contact form section. "Let's Talk" button.	Project information	High
	How can we help information	High
	Exsisting development team information	High
	Name information	High
	Company name information	High
	Email address information	High
	Submit button function	High
Get in touch section	"Partnership" email function	High
	"Media inquiries" email function	Medium
	"Everything else" email function	Medium
Our offices section	Kaunas office address	Medium
	Kaunas office telephone No.	High
	Kaunas office email address	High
	Picture that represents Kaunas office	Low
	Vilnius office address	Medium
	Vilnius office telephone No.	High
	Vilnius office email address	High
	Picture that represents Vilnius office	Low
	San Francisco office address	Medium
	San Francisco office email address	High
	Picture that represents San Fransico office	Low
	Zurich office address	Medium
	Zurich office telephone No.	High
	Zurich office email address	High
	Picture that represents Zurich office	Low
	Amsterdam office address	Medium
	Amsterdam office telephone No.	High
	Amsterdam email address	High
	Picture that represents Amsterdam office	Low

The high priority features would be tested first, then the medium priority features, and the in the very ending, if I would have some time, I would test the low priority points.

### Test the Contact form section. "Let's Talk" button.

I would test it with filling and submitting the form. Then I would check if the provided information was sent correctly to Telesoftas team.

### Get in touch section

In this section email addresses would be checked visually (if the provided information is correct), and the function that after pressing the email address the email application will pop-up with the correct email address in the "Send to" section.

### **Our offices section**

In this section email addresses, telephone numbers (if applicable) and office addresses would be checked visually (if the provided information is correct).

Also, the function after pressing the email address the email application will pop-up with the correct email address in the "Send to" section.

At the very ending, I would check the pictures at the last place as the lowest priority matter.
